

1. Brainstorming & Ideation

A CRM Application for TheChaiShop&Co

1.1 User Story

As a sales representative at TheChaiShop&Co, I want to efficiently manage customer relationships and streamline sales processes using a CRM application. The system should support employer details, distinguish online and offline customer records, automate order and billing calculations, generate reports and dashboards, and send birthday offer notifications.

1.2 Problem Statement

User	Need	Problem / Cause	Impact
Sales Representative	Manage customer orders and billing	Manual calculations can be incorrect	Stressed and inefficient
Store Manager	Monitor sales and customer records	Reports may be delayed/incomplete; data in multiple files	Confused and dissatisfied
Customer	Receive personalized offers and updates	No automated communication	Disconnected and undervalued

1.3 Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

1.4 Empathy Map

Aspect	Description
Think & Feel	Need accurate customer data and reports
Hear	Feedback from management
See	Multiple registers and spreadsheets
Say & Do	Enter data manually
Pain	Errors, delays, data loss
Gain	Automation, fast reports

1.5 Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM

- Salesforce-based CRM
- Automated email system

Selected Idea: Salesforce-based CRM Application for TheChaiShop&Co.
