

3. Project Design Phase

A CRM Application for TheChaiShop&Co

3.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud storage supports data availability, dashboards improve analysis, and real-time reports reduce delays.

3.2 Proposed Solution

Module / Capability	Description
User Authentication	Authorized users securely access the CRM.
Customer Records	Create, view, update and delete customer details.
Employer & Enterprise	Manage employer and enterprise account information.
Order Management	Create and track orders, quantity and product details.
Automated Billing	Formula fields calculate total bill amounts.
Validation Rules	Validate phone, PAN and Aadhaar-related entries.
Record Types & Layouts	Separate online and walk-in customer workflows.
Email Automation	Birthday, offer and order-confirmation notifications.
Reports & Dashboards	Sales/customer analysis and visual summaries.

3.3 Solution Architecture

- Presentation Layer – Lightning UI
- Application Layer – Flows and Logic
- Data Layer – Custom Objects
- Analytics Layer – Reports and Dashboards

The layered architecture is intended to support modularity, scalability and maintainability.
