

## 6. Project Testing

### A CRM Application for TheChaiShop&Co

#### 6.1 Functional & Performance Testing

The source document states that screenshots were captured from the Salesforce Lightning interface to verify system behavior.

| Test Area              | Verification                                                    |
|------------------------|-----------------------------------------------------------------|
| Object Records         | Employer, Customer and Enterprise record creation               |
| Validation Rules       | Aadhar, PAN and phone number validation                         |
| Record Types / Layouts | Online and Walk-In workflows                                    |
| Formula Fields         | Order quantity and total billing calculations                   |
| Flow                   | Birthday email alert execution                                  |
| Reports / Dashboards   | Report and dashboard generation                                 |
| Performance            | Fast response time and system stability during concurrent usage |

#### 6.2 Expected/Documented Validation Behavior

- Aadhar number: 12 digits and numeric according to the documented rule.
- Phone number: exactly 10 numeric digits according to the documented rule.
- Record types distinguish Online Order and Walk-In Order.
- Birthday flow requires the birthday formula to be true and an email to be present.

Note: The uploaded source describes testing activities and areas; it does not provide a numerical accuracy benchmark or a complete test-case execution table.
